SUMMARY

I am a Full-Stack Software Developer and Mobile Developer with hands-on experience building web and mobile applications using React, Django, Kotlin, Flutter, and React Native. I have worked across frontend and backend development, REST APIs, database management, Linux server administration, CI/CD workflows, and basic AWS deployment. I enjoy understanding how systems work, solving technical problems, and turning ideas into applications that are reliable, maintainable, and practical. I work well both independently and as part of a team, where I communicate clearly, contribute to shared goals, and remain open to learning from others. I am comfortable taking ownership of tasks from development through deployment and adapting when a project requires me to learn something new.

WORK EXPERIENCE

Information Technology Support Technician

March 2025 - May 2025

(Nairobi City County - Internship)

- I completed a structured IT internship at Nairobi City County (GPO), gaining hands-on experience in supporting day-to-day ICT operations within a government environment. Assisted in providing technical support to staff, including troubleshooting hardware and software issues, system access problems, and basic network connectivity challenges.
- Supported maintenance of office IT systems and ensured smooth operation of computer equipment, printers, and internal communication tools. Gained exposure to basic network setup and support tasks, including LAN connectivity and user configuration in an enterprise environment.
- Participated in documentation and reporting of technical issues, strengthening my understanding of IT service workflows and professional support procedures. This internship improved my problem-solving skills, communication in a professional setting, and understanding of real-world IT support operations in a public sector environment.

EDUCATION

JOMO KENYATTA UNIVERSITY OF AGRICULTURE AND TECHNOLOGY

Sept 2023 – Sept 2025

- Diploma in Information Technology | Diploma Certificate Awarded

PROJECTS

Job Seer — Intelligent Job Search & Career Management Platform

- Built a full-stack job search platform that helps candidates evaluate opportunities, assess ATS readiness, tailor resumes, generate cover letters, and track applications.
- Developed an explainable job-matching engine using TF-IDF and multi-factor scoring to identify matched and missing skills from job descriptions.
- Implemented resume analysis and versioned tailoring workflows while preserving candidate information across different applications.
- Built a Kanban-style application tracker with status management, follow-up dates, and application history.
- Implemented JWT authentication, role-based access control, security middleware, rate limiting, health checks, and containerized deployment.
- Developed and tested the backend with automated test coverage and security-focused test suites.

Technologies: React, FastAPI, Python, PostgreSQL, SQLAlchemy, scikit-learn, Docker

PROJECTS

EdVantage— Student Performance Monitoring & Intervention System

- Built a full-stack student performance platform that uses machine learning to identify students who may require early academic intervention.
- Developed a Random Forest classification pipeline using academic performance, attendance, and missed-deadline data to generate student risk scores.
- Implemented REST APIs for authentication, student management, risk prediction, model retraining, notifications, and administrative functions.
- Designed role-based dashboards for administrators, supervisors, and students with performance monitoring and intervention tracking.
- Built a data pipeline for extracting and preparing student records for model training, prediction, and continuous retraining.
- Applied JWT authentication, role-based access control, password hashing, database relationships, and modular backend architecture.

Technologies: Python, Flask, React, PostgreSQL, SQLAlchemy, scikit-learn, pandas, NumPy

Attachment Management and Reporting System (Full-Stack Web Application)

- Developed a full-stack platform that digitizes the student industrial attachment process and connects students, industry supervisors, university supervisors, and administrators.
- Implemented role-based access control with separate workflows and permissions for six user roles.
- Built digital logbooks, QR-based attendance, supervisor assessments, meeting scheduling, messaging, reporting, and student ID card generation.
- Designed REST APIs and relational database models for managing students, schools, supervisors, logbooks, attendance, assessments, meetings, messages, and audit records.
- Implemented authentication and security measures including JWT-based authorization, protected routes, security headers, and controlled file uploads.
- Structured the application into reusable frontend components and modular backend services to support maintainability and future expansion.

Technologies: React, Node.js, Express.js, MySQL, Sequelize, JWT

CERTIFICATIONS

- Network Technician Career Certificate — Cisco Networking Academy
- Python Essentials 1 — Cisco Networking Academy
- Introduction to Cybersecurity Awareness — Certificate of Completion
- AI for Beginners — Certificate of Completion
- Data Science & Analytics Foundations — Certificate of Completion
